Hi Jon,

Apologies for the late reply.

Yes, we can confirm that we've received your response. We will be following up on this response shortly, and will likely request to meet with you/your team virtually to further discuss water taking.

Thank you!

Jenn Robinson

Environmental Planner, Transportation GTA
OSEC, Whitby Office

Hello Jon,

We just wanted to kindly follow-up to your previous email to see if you had a chance to confirm the list of Indigenous Communities to contact for this Water and Wastewater Master Plan study.

Several Indigenous Communities were provided with a Notice of Request to Consult at the point of study commencement, however we wish to update our contact list and reach out to any communities you think we may have missed.

Thank you!

Hello Jennifer,

Thank you for your Notice as attached.

I will send on a formal response once respective MECP staff identify the appropriate Indigenous Communities for you to contact with respect to your project.

Provided that there may be a Schedule C component to your Approach 2 for water and wastewater plant expansions - you may seek a pre-consultation water unit staff and approvals engineering staff when it is appropriate for your timelines. Keep in touch on this.

Have a great day.

Ministry of Heritage, Sport, Tourism and Culture Industries
401 Bay Street, Suite 1700
Toronto, ON M7A 0A7

Dear Mr. Harvey,

Reference: The Town of Carleton Place, Master Plan Approach 2, Water and Wastewater Master Plan, Response to Letter Dated June 23, 2021

Thank you for taking the time to provide comments on behalf of the Ministry of Heritage, Sport, Tourism and Culture Industries (MHSTCI) in response to the Notice of Study Commencement in relation to the above-referenced study. Your letter was received by the Town of Carleton Place on June 23, 2021.

The importance of identifying potential and/or cultural heritage resources early in the planning process is understood, and will be undertaken at a broad level of assessment given that the study area for the Master Plan includes the entire Town of Carleton Place, and the alternative solutions for the Schedule B project(s) are anticipated to consist of, in part, alternative sites. As such, please note that the consideration of potential cultural heritages resources will be identified through the following activities:

- Screening for potential cultural heritage resources via consultation with the Town's Municipal Heritage Committee and associated list of properties or districts designated under Parts IV or V of the Ontario Heritage Act, respectively;
- Completing the MHSTCI's *Criteria for Evaluating Potential for Built Heritage Resources and Cultural Heritage Landscapes* Checklist for the alternative solutions (sites) for the Schedule B undertaking(s); and
- Undertaking a Cultural Heritage Assessment and/or Cultural Heritage Evaluation Report, if required, for the recommended solutions (sites) to identify potential impacts associated with the project and set forth measures recommended to avoid or mitigate potential impacts to known or potential cultural heritage resources.

In addition, each of the alternative solutions (sites) will be screened for archaeological potential using the MHSTCI *Criteria for Evaluating Archaeological Potential* and *Criteria for Evaluating Marine Archaeological Potential*. Once the recommended solutions have been identified, a Stage 1 Archaeological Assessment (AA) will be completed by an archaeologist licensed under the Ontario Heritage Act.

July 12, 2021
Joseph Harvey, Heritage Planner
Page 2 of 2

**Reference: The Town of Carleton Place, Master Plan Approach 2, Water and Wastewater Master Plan,
Response to Letter Dated June 23, 2021**

Once completed, these studies will be submitted to MHSTCI for review, and acceptance of the Stage 1 AA into the Ontario Public Register of Archaeological Reports, prior to the completion of the Master Plan.

Should you have any further questions and/or concerns, or require any additional information, please do not hesitate to contact the undersigned.

Follow Up Flag: Follow up
Flag Status: Flagged

Good Afternoon,

Thank you for sharing with us the plans for the Town of Carleton Place Water and Wastewater Master Plan (WWMP) Study. We are pleased to learn about this initiative as it will develop long-term water and wastewater management solutions and certainly set an example for other municipalities.

The concern Sally mentioned in her email was related to the assumptions used in the previous study for deriving low flow statistics. During low flow periods, the streamflow records at Appleton are known to be inaccurate due to fluctuations at the Appleton Dam and frazil ice conditions in winter. As a matter of fact, Water Survey of Canada (WSC) has been attaching a disclaimer on all flows below 10 cms and flagging them as estimates due to downstream dam activity. Also, the validity of the discharge relationship has been questioned due to dam backwater effects.

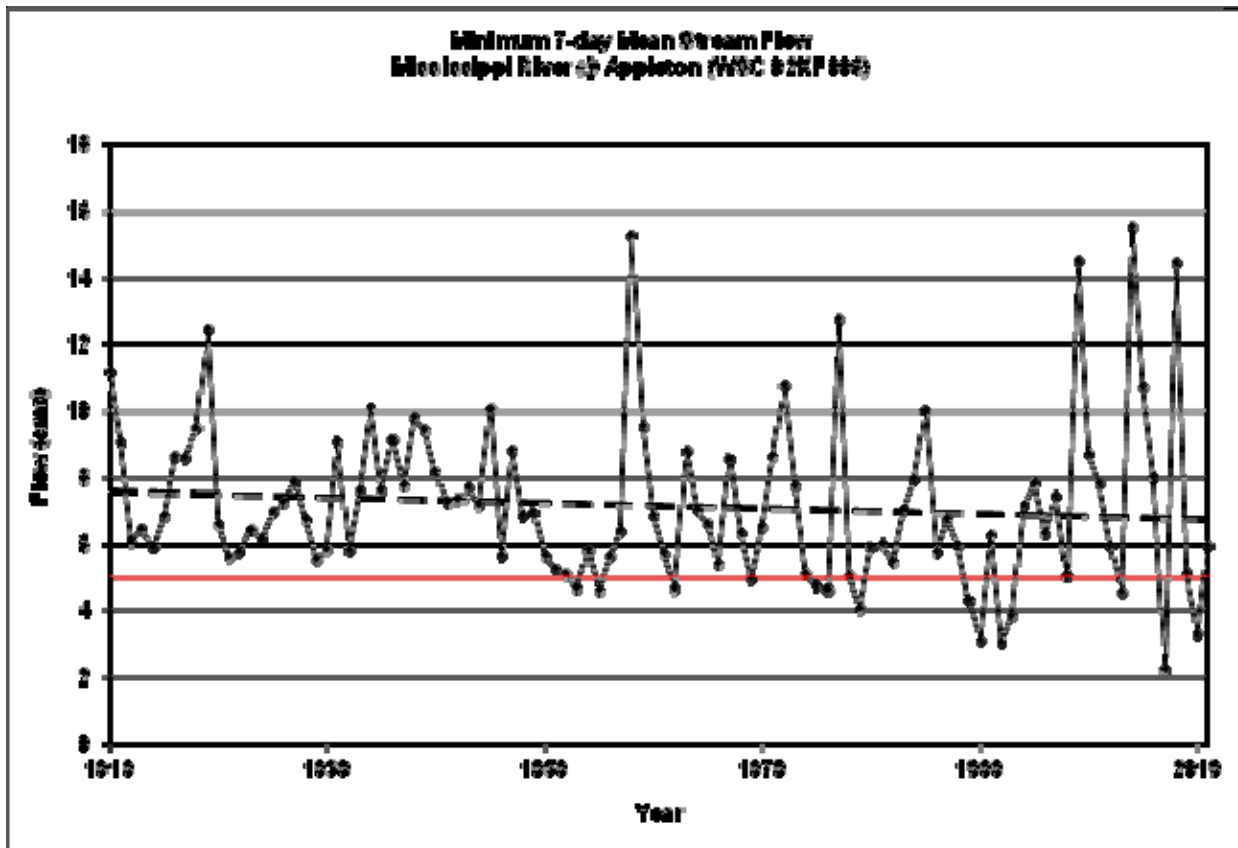

The other concern MVCA staff expressed previously was related to recent streamflow trends observed in the watershed and our ability to maintain flows in our system during extreme (drought) and future (climate change) conditions. During low flow periods, most of the streamflow is released from storage in Crotch Lake which has been sustained in the past but under extreme/future climate projections could be jeopardized. Recent data indicate decreasing trends in minimum 7Q flows and more instances when the minimum flow objective is not achieved (see screenshot below). This year is a good example as we have already declared Level 1 drought condition (one month earlier than in previous years) and we see mid-July water levels at Crotch already (30+cm below normal).

Our 2015 climate change study found that reservoir performance in meeting water level objectives would decrease from the current baseline success rate of 80% to a future success rate of 33% to 53%. The WWMP should therefore look at system vulnerability under current and future water management scenarios and develop resiliency measures for situations when we are unable to replenish storage and/or augment flows.

Please let us know if there is any additional information we can provide for the upcoming WWMP study.

Regards,

Juraj

Hi Sally,

Town staff are somewhat perplexed at your reply regarding the 2018 studies. Staff involved at the time recollect nothing but positive comments from the MVCA on this initiative, with requests made for all the documents to use as a positive example for other municipalities. We have no records of any concerns with respect to the assumptions in these documents. If there are concerns now, please provide them and we will ask our consultant to review these issues.

Regards,

Guy

Thank you Jennifer.

Guy, FYI, it is my understanding that MVCA expressed concern about some of the assumptions made during the 2018 study and we do not necessarily believe it forms a good basis to work from. We can look into this further if desired.

Yours,

Sally.

Subject: RE: Town of Carleton Place, Water and Wastewater Master Plan, Notice of Study Commencement

Hello Sally,

Thank you for your interest in the Town of Carleton Place Water and Wastewater Master Plan (WWMP) project.

Although the WWMP does not include stormwater individually, the sanitary sewer modelling will include stress-testing the system and assessing the resulting hydraulic gradelines (HGLs) in a "rare" event which represents conditions of high extraneous flows with pump stations operating as designed (assumed equivalent to the 1:100-yr I/I), per City of Ottawa Sewer Design Guidelines.

The climate change considerations for this project will build off of the Resiliency Studies that were completed by JL Richards in 2018 for both water and wastewater treatment facilities. This will involve a qualitative assessment of potential climate change impacts that will be considered in the evaluation of alternatives. There is no quantitative modelling planned to simulate sustained drought conditions. The basis for establishing treated effluent limits is the 7Q20 river flow and loading limits previously established by Stantec in an earlier assimilative capacity analysis.

Should you have any additional comments or questions, please do not hesitate to contact us.

Kind regards,

Hi Jenn,

MVCA is very interested in this project and in particular the assessment of the impacts of climate change on both the water intake and wastewater discharges. Specifically, we are interested in potential modeling of sustained drought conditions on operations. Can you confirm whether the scope of work includes these consideration; and if it also includes the stormwater system?

Yours,
Sally

Subject: RE: WWMP

Thank you for your email.

Then why do municipalities that have meters not stop installing into new homes. And why did the city of North Bay have serious discussions about installing water meters last year?

I am tired of paying for wasteful thoughtless residents who will not even bother to replace a tap washer, water their lawns for the weekend while they are away. "We all pay the same rates."

The reason given to me by the previous Council was that having meters will not save water. Ya. Right. And by having gas and hydro meters consumers do not monitor their related costs.

Then again, water is free. And we have lots of it. So much so that we can flush it down the toilet and not worry about the costs. The 50's ended 70 years ago.

I am sure that I can find somewhere graphs that show that the earth is flat. In summary, I respectfully don't agree.

Thank you
[REDACTED]

On Jun. 4, 2021 7:47 a.m., Guy Bourgon <gbourgon@carletonplace.ca> wrote:

Good Morning [REDACTED]

The Town has considered metering residential accounts in the past however have concluded that doing so would ultimately increase the cost of water and sewer services to residents for the following reasons:

- Cost of purchasing and installing meters for all residential connections
- Cost of staff or contracted service to read meters every billing cycle or software licences for remote reading system
- Cost for staff to enter meter readings into financial system
- Cost for saving for capital replacement of meters

In addition, there would still be a need to have a large fixed component on bills because most of the costs to provide these services are fixed and do not vary with the amount of water used (i.e., treatment plant operations, maintenance and replacement of underground infrastructure, staff at the treatment plants, etc...). Variable costs are very limited (i.e., chemicals used during treatment). Most other municipalities have a fixed portion on their bills for this reason. Carleton Place has been able to keep costs low partially as a result of this policy. The chart below shows Carleton Place's rates in 2020 compared to other municipalities.

Many municipalities went to metering in an effort to encourage reduced water usage however studies have now shown that rate of consumption is not significantly impacted by metering systems. The chart below shows evidence to support this by comparing local municipalities that have a variable portion to their bills a compared to Carleton Place that does not:

Thank you for your inquiry and have a wonderful weekend.

Hello Mr. Bourgon. If you really want a workable water and wastewater plan, implement water meters. This is one approach that will ensure a cost effective system.

Ask yourself, if we didn't have hydro meters would we be using more or less hydro?
